

NISSAN GT-R R35

PFC Direct Drive V2, two-piece floating, front and rear brake disc assemblies to replace original equipment discs and uprated PFC brake pads.

Front disc showing mtg system

Front & Rear discs & pads

Rear disc with integral drum

This package has been designed to directly replace the original equipment fitted on the GT-R35. These discs do not have any drilled holes which have been associated with the propagation of cracks. Both front and rear discs are mounted to the bells using our own Direct Drive V2 mounting system which also incorporates an anti rattle device to eliminate the noise that can be associated with floating disc assemblies.
