

Bathurst 12hr Success for Project Mu

In recent years Project Mu has firmly established itself as World leaders in endurance brake pad technology. The Bathurst 12 Hour race is one of many successful forays into the endurance racing field. From the famous 24hr races at Nurburgring, Dubai and Tokachi to the 12 hour events in Sepang and Bathurst, Project Mu have supplied brake pads to many of the winning teams in the last few years.

This year's Bathurst 12hr race, Project Mu pads were in 6 of the top 10 finishing cars, and not one of them needed a pad change! Congratulations to Team Mitsubishi Ralliart on a fantastic 1-2 result for the second year running.

Well done also to Steve Owen and the Koundouris Bros for placing a newly completed Evo 9 on pole position on Saturday afternoon by a whole 1.8 seconds!

As well as the feature race, Tony Quinn won the first round of the 2009 Porsche GT3 Cup Challenge during the weekend at the Mountain - also using Project Mu brake pads. Well done to Tony and the VIP Petfoods team.
